

Scanners for Remittance Processing

A4 and cheque-format capture

Best in Class

With many scanners in the market place, Solchar has chosen to work with the industry leaders. Our aim is to ensure customers have the best tool for capturing data and images. We expand our range of specially integrated capture equipment only after rigorous and exhaustive testing.

Scanners are competitively priced with short lead times to supply bulk orders. Some can be delivered with customer livery on request.

Innovation

Frequently asked to collaborate on scanner development, we share our experience of business process requirements to ensure customer image capture workflows are best accommodated. Solchar regularly evaluates upcoming scanner hardware innovation with development teams. As market sector leaders for cheque and remittance software, Solchar is approached by manufacturers to integrate our software with their products to achieve business process optimisation.

Advanced Functionality

Scanning solutions are suitable for location in post rooms, customer-facing situations or general office installation. Dependant on the volume and style of capture or process requirement, the most cost effective scanners are selected, incorporating the most suitable attributes which include:

- ✓ smooth automatic document feed
- ✓ multiple format feed (A4 and cheque-size)
- ✓ distributed item capture (DIC) capacity
- ✓ speed of capture - up to 200 documents/minute
- ✓ one or two-sided capture at a single pass
- ✓ single pocket or multiple pocket sorting
- ✓ adjustment for documents of different lengths

Advanced Solutions for Document Processing

Software Integration

Solchar has worked closely with scanner suppliers for more than seven years to take capture device functionality and enhance it to a level where the synergy between hardware and software is second to none. The intrinsic uniqueness of paperware such as remittance advices, cheques, traveller's cheques, bank giro credits, vouchers and coupons, requires skillful data capture field adjustments. We adapt these to specific requirements and thereby maximise processing accuracy. Efficient data integration can then take place into existing systems.

Business Continuity

The long life-expectancy of scanners translates to significantly lower hardware acquisition and running costs with minimal unscheduled maintenance. Our fully trained electrical engineers in the UK carry out servicing and repairs on most models. Maintenance agreements can be established. Rapid support or choosing our scanner swap out arrangement means little or no disruption to your business.

- ✓ document double detect
- ✓ MICR read technology E13-B and CMC-7 fonts
- ✓ black & white and grayscale images
- ✓ integrated or optional OCR engine
- ✓ image resolution up to 200/300 dpi
- ✓ DIB, BMP, JPEG, TIFF image formats
- ✓ ink jet printing capacity
- ✓ advanced ergonomic design
