

Best in Class

With many scanners in the market place, Solchar has chosen to work with the industry leaders. Our aim is to ensure customers have the best tool for capturing data and images. We expand our range of specially integrated capture equipment only after rigorous and exhaustive testing.

Scanners are competitively priced with short lead times to supply bulk orders. Some come with special product livery on request.

Innovation

Frequently asked to collaborate on scanner development, we share our experience of business process requirements. Solchar regularly has the opportunity to evaluate upcoming scanner hardware innovation on behalf of its customers. As market sector leaders for cheque and remittance software, we are approached by manufacturers to integrate Solchar software with their products to maximise functional value.

Advanced Functionality

Scanning solutions are suitable for location in post rooms, customer-facing situations or general office installation. Dependant on the volume and style of capture or process requirement, the most cost effective scanners are selected, incorporating the most suitable attributes:

- ✓ hand or automatic document feed
- ✓ distributed item capture (DIC) capacity
- ✓ speed of capture - up to 200 documents/minute
- ✓ one or two-sided capture at a single pass
- ✓ single pocket or multiple pocket sorting
- ✓ adjustment for documents of different lengths
- ✓ document double detect

Software Integration

Solchar has worked closely with cheque scanner suppliers for more than seven years to take capture device functionality and enhance it to a level where the synergy between hardware and software is second to none. Analysis of the intrinsic uniqueness of paperware such as cheques, traveller's cheques, bank giro credits, vouchers and coupons, leads to skillful adjustment and product development in order to maximise processing accuracy.

Business Continuity

The long life-expectancy of scanners translates to significantly lower hardware acquisition and running costs with minimal unscheduled maintenance. Our fully trained electrical engineers in the UK carry out servicing and repairs. Spare parts are in stock for a guaranteed quick turn round and easy swap out arrangements mean little or no disruption to your business.

- ✓ MICR read technology E13-B and CMC-7 fonts
- ✓ black & white and grayscale images
- ✓ integrated or optional OCR engine
- ✓ image resolution up to 200/300 dpi
- ✓ DIB, BMP, JPEG, TIFF image formats
- ✓ ink jet printing capacity
- ✓ small footprint, space-saving format
- ✓ advanced ergonomic design
